Elena Vance		Graphic Designer	

Requirement

HR team currently manages employee records using spreadsheets and emails. This results in data inconsistency, manual errors, and difficulty tracking employee status.

Goal is to build a centralized SAP Fiori Employee Management application that allows HR managers to view, create, and update employee information in one system.

User Persona

Sarah Williams

29 years / Female

HR Manager | Experience: 8+ Years

Goals:

- Quickly find employee details
- Update job information easily
- Track active and resigned employees
- Reduce spreadsheet dependency

Pain Points & Needs:

- Employee data stored in Excel files
- Duplicate entries
- No centralized system
- Manual update errors
- Difficult to track employee status

Bio:

Sarah is a seasoned HR professional looking to replace slow, manual workflows with a centralized SAP Fiori app to manage employee records quickly and accurately.

Challenge & Solution

Challenge:

Managing employee records manually across different departments was slow and prone to errors. Sarah lacked a centralized dashboard, making it difficult to find specific details or update job titles and departments quickly.

Solution:

Developed a responsive SAP Fiori Freestyle application that centralizes all employee data. The app provides a searchable list and a dedicated detail view, enabling HR to view and edit information instantly with a professional, user-friendly interface.
